

The following table shows the results of the regression analysis for the dependent variable "Number of children in the household" (N = 1,000). The independent variables are "Age of the head of household" and "Gender of the head of household". The table includes the coefficient estimates, standard errors, and t-statistics for each variable.

Variable	Coefficient	Standard Error	t-statistic
Age of the head of household	0.001	0.001	1.2
Gender of the head of household	0.002	0.002	1.0
Constant	1.5	0.5	3.0

The results indicate that the age of the head of household has a small positive effect on the number of children in the household, while the gender of the head of household has no significant effect. The constant term is also positive and significant.
